Luke B. Patient Blood management

Kelly Finzi
Lead Patient Liaison
Bloodless medicine & surgery
kelly.finzi@lvhn.org

Darvin Loffin
Patient Liaison
Bloodless medicine & surgery
darvin.loffin@lvhn.org

Warren D. Behr MBA, CPHQ
program director
PBM/Bloodless Medicine & Surgery
warren.behr@lvhn.org

How beliefs alter medical approach.

The time-sensitive nature of
blood makes it very expensive

Patient Blood management

1. Improve surgery
2. Promote holistic patient observation and medical implementation
3. Optimizing coagulation
4. Managing anemia

Best Patient outcomes

10/30 rule lasted 60 years before being disproved

Restrictive strategy is more efficient than liberal strategy

Improve PBM by given
1 unit and waiting to
see rather than 2+ and
then let them loose.

JW obj. to \wedge PBM
Position
Strategies
Network

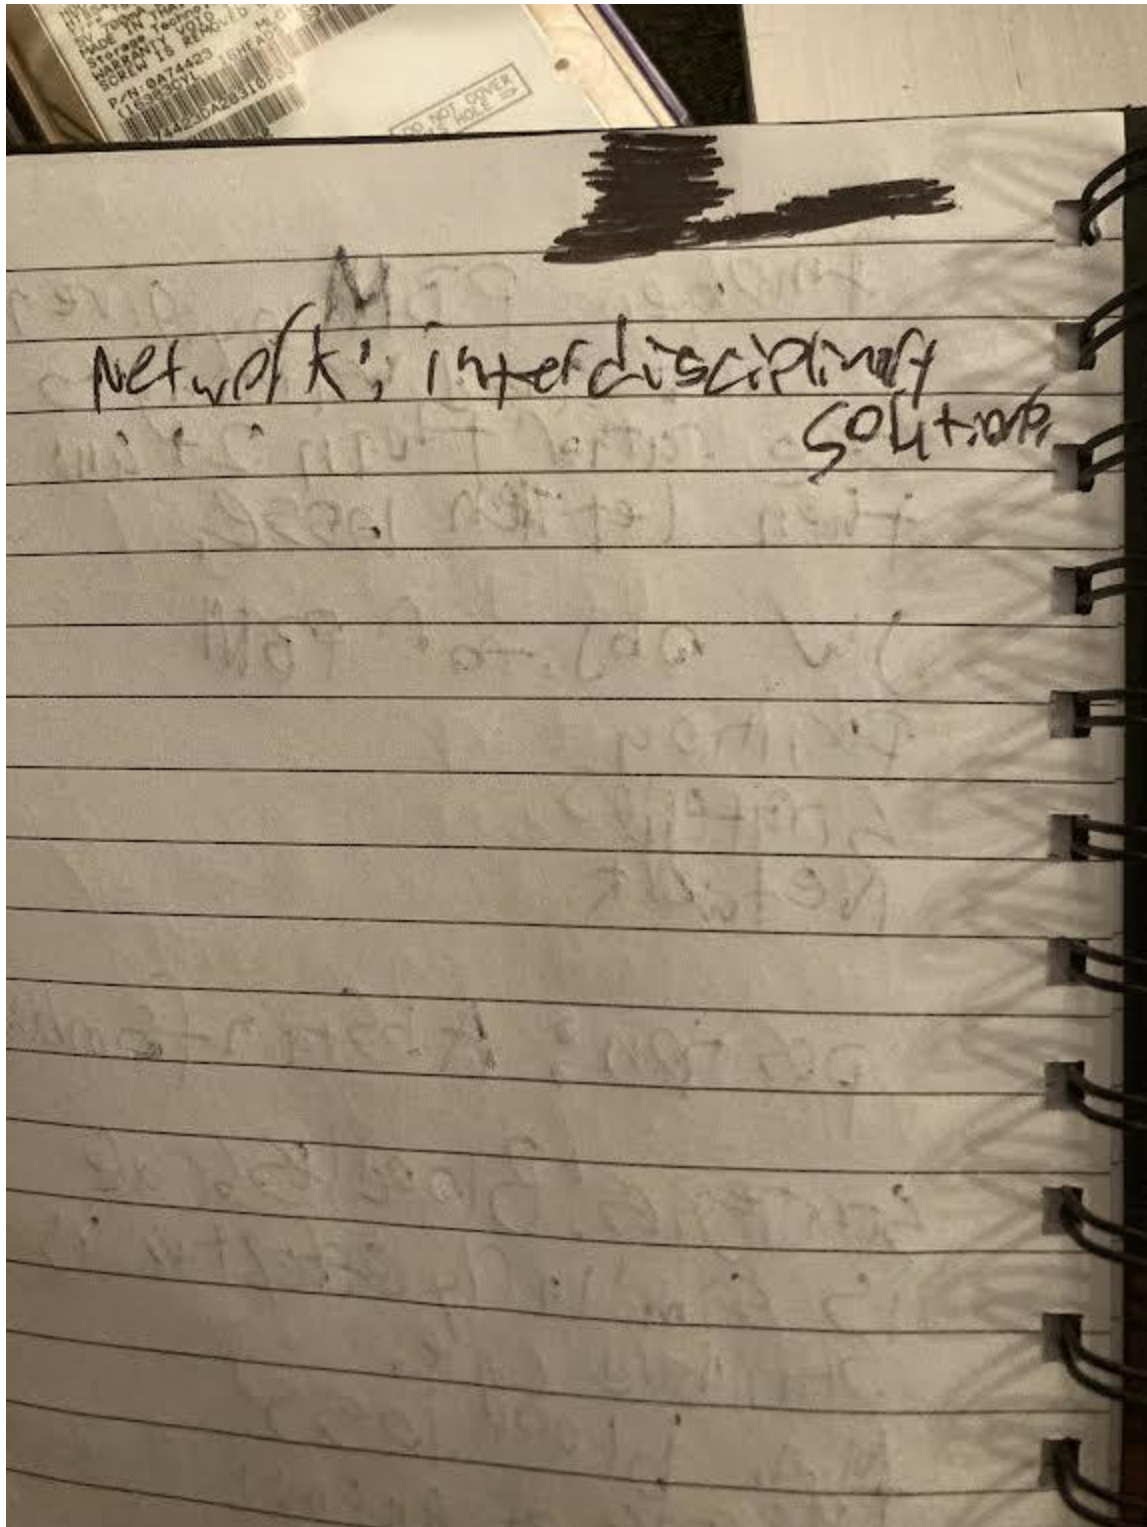

position: Abstract from dog

Strategies: Bloodless scale
is similarly effective as
standard care.

Min. blood loss.

Prevalence of anemic
Autologous BM

Enhancement of Hematopo.

2. "Good patient blood management results in the best patient outcomes." I think one specific thing that will aid my future career is the attention to efficiency and the best use of the limited materials one has. As an engineer, I will have to work within budgets and material limits so that is something important to keep in mind.

3.
