

Name: Luke Buonanno

Date: 3/13/24

1. Industry Name: Telemedicine

Address: 2024 Lehigh St Ste 100, Allentown, PA 18103

Speakers: Lorraine Valeriano

2. We arrived at the building and were ushered into a room with a bunch of monitors that were used for telemedicine. The hours are from 7 to 7 and there is a team of five people who are not allowed to leave the room until night. They use cameras and monitors to be able to see what the patient is doing and all their vital signs. Using this equipment they can help the in-person staff make diagnoses and other functions. Another branch of telemedicine is remote nursing. Nurses can interact with patients and perform functions that can be done without direct patient contact like signing papers among other things.

3. One thing that was interesting was the workspaces that the staff used. They are optimized for the best workflow and most efficient which was interesting from an engineering perspective.

4. One specific way that this information gained during the tour can be applied to my future professional endeavors is to remember efficiency when designing things as an engineer.
