

Name and Credentials:

Michael Hortner: MD wound care specialist

Charles Barker: Prehospital EMS Liaison

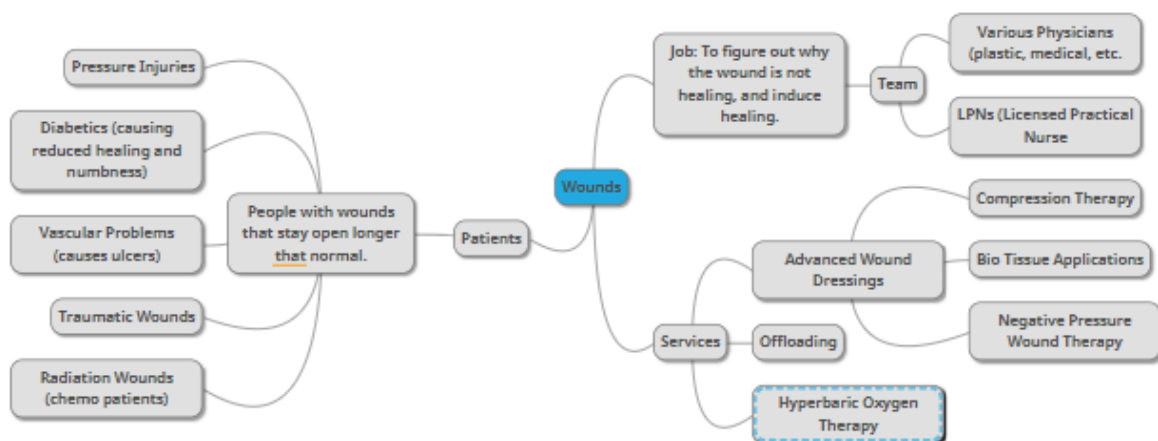

Melinda Shoemaker: Director of Post-Heart attack rehabilitation program

William Merket: Director of Cardiopulmonary Rehabilitation

Jason Hauz: IT Services

One quotable quote was “Elderly Patients take much longer to heal wounds.”

I thought that wound care was actually really interesting, and although I will not go into that field I thought the types of dressings they used were pretty cool. One particular thing I thought was interesting was the negative pressure vac that they use to stimulate growth. Knowing the principles involved in creating such a device could help me in my career.

Luke B.

Team: Whole bunch of physicians  
LPNS (Licensed Practical Nurse)

Patients: when you have a wound  
and it takes longer than normal  
to heal.

Pressure injury: immobile patients  
caused by pressure on skin usually  
over a bone.

Diabetics: reduced healing.
