

Luke Buonanno

9/23/2023

1. Desales University
2755 Station Ave, Center Valley, PA 18034 (the teachers did not give me the contact information at the time of submission)
2. We learned about the programs in Desales from anything from the nursing program to the accelerated PA program. We also spent time in their state-of-the-art sim lab which included 1 of 27 mannequins along with monitoring for each room. We also used otoscopes to view ear drums and used stethoscopes to listen to heart murmurs and lung patterns.
3. The AI in the mannequin is a connection to my past knowledge as I have worked extensively with AIs over the years and it was interesting to see it in action.
4. One specific way this information could be applied to my professional career is their apt use of technology to aid in processes such as education and using cutting-edge technology such as AI in a beneficial manner. As an engineer, I will have to think outside of the box quite a bit, and these were some great examples of others doing so.
